ORIOLE BIRDING

Radde's Warbler.

TOUR REPORT

Shetland MIGRATION
4th-15th Oct 2026

www.oriolebirding.com info@oriolebirding.com

Sunday 4 October

Weather: SW wind 25 mph; grey and overcast, with occasional light rain.

Most of the group had travelled by minibus from Norfolk and stayed overnight at the Somerton Hotel, Lockerbie. After breakfast we continued north to Lunan Bay, just south of Montrose, to look for a reported White-winged Scoter before catching the ferry to Shetland. From the dunes we scanned the sea, where around 2,000 **Common Scoters** were gathered in long, loose flocks, accompanied by smaller numbers of **Velvet Scoters**. A possible **White-winged Scoter** was picked out, but views were too distant and brief to truly confirm its identity. Several hundred auks, mainly **Guillemots** with some **Razorbills**, were present, as were around 80 **Red-breasted Mergansers**, seven **Long-tailed Ducks**—including a striking male—four **Wigeon** and six **Barnacle Geese**. **Red-throated Divers**, **Shags**, **Little Gulls** and **Kittiwakes** were also noted. A final scan of the beach added **Ringed Plover** and **Sanderling**. A pair of **Sparrowhawks** circled over nearby trees, while **Mistle Thrush**, **Yellowhammer** and **Pied Wagtail** were seen near the car park. We also added **Common Eider** while driving through Montrose.

After lunch we boarded the ferry, which departed slightly ahead of schedule. From the top deck we saw three **Arctic Terns**, **Guillemots**, **Razorbills**, **Cormorants** and **Shags** around the harbour, followed offshore by Gannets and large numbers of Kittiwakes. Arctic and **Great Skuas** gave excellent views alongside the boat, and several **Puffins** were seen. An impressive flock of around 100 **Barnacle Geese** flew past and towards land.

Monday 5 October

Weather: W wind, 16°C; very windy (35–50 mph), with occasional sunny spells and one brief, heavy shower.

We arrived in Lerwick on time and met the remaining members of the group before heading to the docks to look for a long-staying female **King Eider**.

Initially distant, the bird eventually came closer to our sheltered viewpoint, allowing useful comparison with **Common Eiders**: its paler plumage, bill shape and distinctive facial pattern clearly seen. Other sightings included winter-plumaged **Black Guillemots**, a calling **Rock Pipit** and skeins of **Pink-footed Geese**.

At Clickimin Loch, six **Tufted Ducks** and two **Red-breasted Mergansers** were on the water, while nearby trees held at least four **Siskins** and two **Lesser Redpolls**. We then searched near Bixter for a reported Great Grey Shrike, unfortunately drawing a blank. Tingwall Loch was next for lunch, where the nearby hillside held **Curlews**, **Golden Plovers**, **Ruff**, **Dunlin** and **Turnstones**.

News of an Arctic Warbler at Gott drew us to a plantation, but the bird remained elusive in the wind and dense cover. A calling **Yellow-browed Warbler** was some consolation, although it was not seen. Stops farther south produced **Swallows** and a **Redwing** at

Levenwick, and several hundred **Golden Plovers**, **Ruff**, **Dunlin**, **Common Snipe** and **Pink-footed Geese** at Fleck. We finished at the Pool of Virkie, where a solitary **Whooper Swan** was the highlight.

Female King Eider Lerwick Harbour

Tuesday 6 October

Weather: 12°C; light-to-moderate breeze, mostly cloudy with brighter spells and an occasional shower.

We began with a walk from the hotel towards Sumburgh Farm. Four **Whooper Swans** flew over, two **Common Snipe** fed beside the garden pond, and a **Grey Wagtail** passed calling overhead. Two **Northern Wheatears** were perched on a dry-stone wall, and four redpolls flew over on our return.

The quarry near Sumburgh Head was quiet, so we continued to the lighthouse and cliffs. In the sunshine, **Shags** rested on the cliffs and **Gannets** fed offshore. On our return, we stopped at Grutness, at a garden there, finding two **Bramblings** and two **Yellow-browed Warblers**, which showed well before a shower arrived.

At Fleck we searched successfully for a **Buff-breasted Sandpiper**, but it unfortunately flew before everyone had seen it properly. A stop at the old hotel at Spiggie produced two **Yellow-browed Warblers**, and a **Dunnock**, the latter not a common bird on Shetland. From the hide at Loch Spiggie, we watched **Whooper Swans**, **Wigeon** and **Tufted Ducks**, with **Goldeneye**, several **Scaup**—including fresh-looking males—and a **Slavonian Grebe** among them.

Exnaboe was next, where a **Common Redstart** was our best sighting, before heading to Fladdabister for a reported **Arctic Warbler**. After an initially quiet search, the bird appeared in a garden behind the house and gave excellent views. A final stop at Levenwick produced seven **Swallows**, a male **Blackcap** and another **Brambling**.

Arctic Warbler

<u>Wednesday 7 October</u>

Weather: Light SW wind, around 12°C; mainly sunny despite a forecast of rain, with one prolonged shower.

After checking the bay and gardens near the hotel, we headed to nearby Grutness again, where a **Red-throated Diver** and **Black Guillemots** were in the bay. A stop near Boddam revealed a flock of finches in a harvested field which proved to be mostly **Twite**. A nearby **Hooded Crow** was harassing a **Merlin**, which had caught prey and was watched, settled, as it sat on a fence post to eat it.

At Levenwick, we finally caught up with the **Western Siberian Stonechat**. Most of the group enjoyed reasonable views before it disappeared again. A **Song Thrush** and **Chiffchaff** were also new for the trip, and a **Slavonian Grebe** was just offshore. We sadly found a dead **Jack Snipe** beside the road, apparently a traffic casualty.

Near Hoswick, seven **Mealy Redpolls** showed well and offered a useful comparison with the Lesser Redpolls seen earlier in the week. We had lunch by the beach in sunshine and calm conditions, with another **Merlin** passing over the fields. The nearby gardens and the Orca Inn

produced a few common migrants, including **Goldcrest**, **Willow Warbler**, **Brambling**, **Blackcap** and **Chiffchaff**.

Later, at Spiggie, we found the reported **Red-backed Shrike** perched on fence posts along the field edge, where it remained in view for around 20 minutes.

Red-backed Shrike at Spiggie Loch

News then came of a **Western Bonelli's Warbler** at nearby Skelberry. After an initial spell in which it disappeared, the bird reappeared and gave the group some fantastic views in the evening sun.

<u>Thursday 8 October</u>

Weather: 10°C; light northerly wind, sunny with scattered cloud.

A very productive day which began at West Voe, where two drake **Long-tailed Ducks** and a **Great Northern Diver** were offshore. At Spiggie Loch, we quickly located both the reported drake **American Wigeon**, and the **Red-backed Shrike** seen the previous day. **Greater Scaup**, **Goldeneye** and **Slavonian Grebe** were also present.

At Fleck, two **Wheatears** were on waste ground and movement in the vegetation revealed our hoped-for target, a **Bluethroat**. We then watched it moving through the cover and occasionally coming into full view.

Next came a remarkable opportunity at Sumburgh Hotel, where a **Lanceolated Warbler** had been found inside a building, trapped, and then ringed for release. A rapid transit south saw

us amongst the assembled waiting crowd, seeing it well in the hand before watching it fly away.

Lanceolated Warbler being released.

A return visit to Levenwick finally gave much better views of the **Western Siberian Stonechat**, with a **European Stonechat** nearby for comparison.

While having lunch at Spiggie Loch, we searched the seed crop for a reported **Common Rosefinch** and were rewarded when it appeared among the sparrows, giving everyone good views. At Clickimin Loch, we found the elusive **Olive-backed Pipit** in woodland scrub; views were brief and depended on where each observer stood.

Our final stop was near Hillswick, where a **Radde's Warbler** was feeding in iris beds. Although it often stayed low in the grass, it also showed well in the open, providing an excellent end to a memorable day.

Friday 9 October

Weather: Strong W wind, with rain during the morning; clearing around lunchtime, then brighter with lighter winds.

Rain and strong winds delayed our departure by half an hour, but with little sign of a break, we set off anyway. **Redwings** were arriving in numbers this morning, with flocks repeatedly lifting from roadside fields as we travelled. A **Red Grouse** beside the road gave particularly good views.

We visited Eshaness Lighthouse and Murrion before returning briefly to the hotel. As the weather began to brighten, a walk nearby produced more **Redwings**, several **Bramblings** and a calling redpoll. At Ronas Voe, **Redwings** again dominated, with a few **Bramblings** among them.

The most productive stop was a well-vegetated garden at Collafirth, where the owners kindly invited us in. The small wood held a **Pied Flycatcher** and a **Yellow-browed Warbler**, and several **Fieldfare** too.

Pied Flycatcher at Collafirth

Ollaberry was quiet for passerines, but two **Red-throated Divers** were on the voe, and a late **Hummingbird Hawkmoth** visited a fuchsia bush. Our final stop, Scatsa Plantation, held many **Redwings** and **Blackbirds**, with a **Woodpigeon** new for the Shetland mainland list.

<u>Saturday 10 October</u>

Weather: 12°C; light NW wind, sunny with blue sky and scattered cloud.

We started the day looking over the nearby voe after breakfast, noting three **Otters** swimming just offshore in the bay. A visit to Unst was on the cards for us today, with us noting another Otter as we waited for the ferry to Yell. We then continued across Yell and took the ferry to Unst.

We headed north with our first stop Norwick, where a seed crop held around 50 **Bramblings**, with smaller numbers of **Twite** and **House Sparrows**. **Chiffchaffs** and **Blackcaps** were

noted on the walk to the nearby house and garden, along with a **Yellow-browed Warbler** beside the burn. **Redwings** and **Bramblings** were conspicuous around the trees.

One of the half a dozen Yellow-browed Warblers we found during the trip.

A calling **Hawfinch** briefly appeared, but quickly disappeared into cover, with only two of the group members obtaining good views. A **Goldcrest** was also found during the search for it.

On the return to the bus, we saw a juvenile **Common Tern** offshore and **Turnstones** and **Ringed Plovers** on the beach. After lunch near the Heritage Centre, we visited the Shore station and Hermaness area, then made a brief cultural stop at the Viking longhouse and longship at Haroldswick. Four **Twite** were the best birds at Uyeasound before we caught the ferry back.

Two more **Otters** appeared during the crossing, repeatedly surfacing and diving. The clear skies that evening, also gave us a bonus, with a memorable view of the Northern Lights.

Sunday 11 October

Weather: 11°C; light northerly wind and sunshine.

Four **Otters** were in the voe near the hotel at the start of the day. We revisited Eshaness in better weather, seeing three **Red Grouse** and a **Fieldfare** among the roadside birds. The lighthouse area was quiet, as was Murrion, where a **Chiffchaff** was the main highlight. At Orbister, a flyover **redpoll** was our best sighting.

A visit to Yell was our main destination today, with another **Red Grouse** seen on the way to Toft, and a **Merlin** flew over while we waited for the ferry.

We had some nice views of Red Grouse on several occasions on the trip.

On Yell, stops at Cullivoe and Belmont were quiet, with **Chiffchaffs** and **Blackcaps** the main birds.

After lunch at Mid Yell, a **Wheatear** on a rooftop and a **Yellow-browed Warbler** in a garden improved the list.

A second **Yellow-browed Warbler** was found at Burravoe before we returned to the mainland. Scatsa Plantation on our return was again quiet, apart from **Chiffchaffs**.

Monday 12 October

Weather: 13°C; breezy SSE wind, dry initially, with strengthening wind and rain late afternoon.

Before leaving Hillswick, we checked the voe for **Otters**, but none were present. A nearby garden held around a dozen **Bramblings** and two **Twite**. At Swining, **Redwings** and **Blackbirds** were again common, and another **Merlin** flew past.

We detoured to Lerwick after news of a **Hornemann's Arctic Redpoll** at the Burn of Sound. After a short wait, we found it feeding low on seed heads and enjoyed excellent views of this distinctive pale and striking finch.

Hornemann's Arctic Redpoll

At Easter Quarf, we searched for a **Grey-cheeked Thrush** reported earlier in the week. After nearly an hour, it finally appeared, moving into and along a line of trees beside the burn, giving us some great views.

We enjoyed some nice close views of the Grey-cheeked Thrush.

We had lunch at Quendale Mill before the strengthening wind prompted a change of plan.

At Setters Marsh, a flock of several hundred **Wigeon** included the drake **American Wigeon**. We then watched from the hide at Spiggie Loch before ending the day at the Pool of Virkie, where at least ten **Bar-tailed Godwits** were new for the trip.

Tuesday 13 October

Weather: 13°C; very strong S–SW wind (40–50 mph), with rain gradually clearing.

Heavy rain and strong winds delayed our start today. At the Pool of Virkie, we finally found the long-staying juvenile **Curlew Sandpiper**, helped by more favourable tidal conditions. A flooded field at Fleck held **Barnacle** and **Pink-footed Geese**, two **Bar-tailed Godwits** and a flock of **Golden Plovers**.

At Quendale Mill, **Redwings** and **Blackbirds** were plentiful while we searched for a **Great Grey Shrike** reported nearby. The bird eventually appeared on a fence line, giving everyone good scope views, before a heavy shower sent it out of sight. It fortunately reappeared, flying over the nearby fields before settling beside the burn, allowing longer and more satisfying view.

Great Grey Shrike, a distant record shot.

We then searched unsuccessfully for **Jack Snipe** at several sites, although **Common Snipe** were plentiful. Hillwell Loch held two **Swallows** and a **Little Grebe**, the latter new for the trip. News of a **Golden Oriole** near Lerwick prompted a change of plan, and we were soon rewarded with good views of the bird in and around a small, sheltered woodland.

1CY Golden Oriole, A welcome addition on a rather blustery day.

A last search for **Jack Snipe** was finally successful with one detected crouched at the edge of a small marsh, with a heavy rain shower unfortunately bringing the visit to an early end.

Wednesday 14 October

Weather: 13°C; grey and cloudy, with a strong southerly wind around 40 mph, rising to 50 mph during the journey to Aberdeen.

We began with another walk to Sumburgh Farm, but the wind made birding difficult, and a frustratingly brief glimpse of a small unidentified warbler was all that stood out. At the marsh where we had found a **Jack Snipe** the previous day, thermal cameras detected four heat signatures in the deep in grass, but try as we might, we could not locate the birds visually.

Two members of the group then left us, to spend their final day independently. The rest of us visited the hide at Spiggie Loch, where **Whooper Swans**, **Greater Scaup** and **Goldeneye** were present. Geosetter Burn was next, but disappointingly quiet. We then searched shorelines at Bigton, Ireland and Leebitton for Purple Sandpipers among the Turnstones, but drew a blank.

After lunch at Hoswick, we travelled to Lerwick and spent the remaining couple of hours there before boarding the ferry for the return crossing to the mainland.

Thursday 15 October

Weather: 13°C; light southerly breeze and cloudy.

A rough crossing and an unfavourable wind direction delayed our arrival in Aberdeen by about an hour. With time available before the journey south, we visited the Ythan Estuary, making several roadside stops before finishing at the hide overlooking the mudflats.

A covey of four **Grey Partridges** was in a roadside field, and six **Tree Sparrows** were in bushes by the hide. Among the many waders, ducks and gulls were several **Goosanders** with the **Red-breasted Mergansers**, two **Greenshanks**, two **Curlew Sandpipers**, a **Ruff** and a **Little Stint**.

After dropping two group members at Aberdeen Airport, the rest of us continued south, stopping again at Lunan Bay. Scanning the sea revealed at least 60 **Velvet Scoters**, around 20 **Red-throated Divers**, **Red-breasted Mergansers**, **Common Eiders**, three **Long-tailed Ducks** and two **Little Gulls**. We then continued to the Somerton Hotel in Lockerbie, arriving in the late afternoon.

A few other memories of the trip below, many thanks to Tony, Andy and Eileen for sharing their pictures for use in the report.
